	CODE:	JSFW.L.A102 (LMS)
	TYPE:	LONG
	LOC:	N/A
	DURATION:	360 MINUTES

Objectives

After finishing the following exercises, trainees will:

- Understand Spring Core (IoC, DI)
- Practice with JDBC Templates to connect database in spring
- Use JPA for object-relational mapping
- Practice with the Spring MVC framework architecture
- Know how to write a Web application with Spring MVC Framework and Spring Data JPA

Business needs

Create a Web application based on HTML, CSS, JavaScript, Ajax, Thymeleaf, Spring framework.

The Course Sharing System that we are going to develop is a single-instructor system (for this assignment).

1. The **Instructor** of the system will be able to perform the following actions:
 - Login and logout
 - Create, update and delete Courses
 - Publish, unpublish and archive Courses
 - Approve and delete Reviews
2. All other users are **Students** (guests) who can perform the following actions:
 - Read Course details and published content
 - Create Reviews (with a 1-5 star rating)
3. Additional Requirements for this system include:

The homepage of the system should display a list of the most recent, published **Courses**.

- If a page contains more than 10 Courses, they should be displayed in pages.
- The system should display a Course together with its approved Reviews.
- The system should be able to list Courses with a specified Category.
- The system should show a cloud of Categories indicating their use frequencies.
- The system should show a list of most recent Reviews.

Working Environments

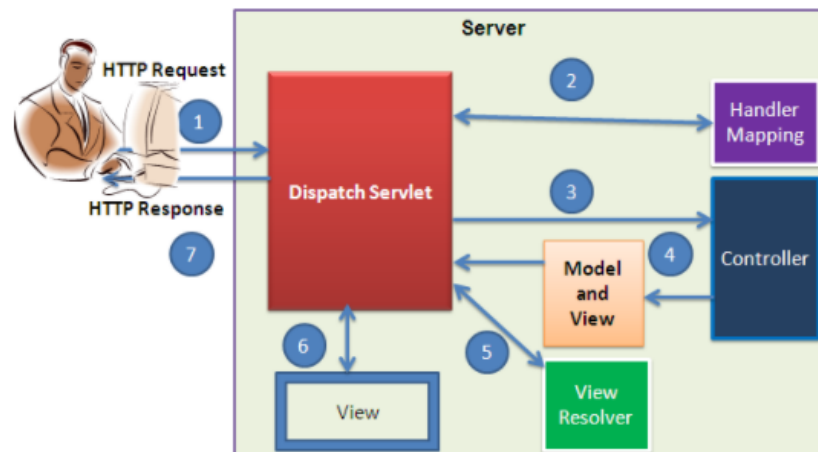

- ✓ JDK 1.8 +
- ✓ Maven 3+
- ✓ Eclipse IDE or STS,
- ✓ MySQL DB Server/MySQL,

- ✓ Apache TomCat 7 or later,
- ✓ Internet connection,

Delivery: Source code, deployment and testing, reviewing evidences packaged in a compress archive.

Product Architecture

Web applications are by nature distributed applications, meaning that they are programs that run on more than one computer and communicate through a network or server. Specifically, web applications are accessed with a web browser and are popular because of the ease of using the browser as a user client.

The product is implemented using MVC Pattern base on Spring Web MVC.

Technologies

The product implements one or more technology:

- HTML & CSS
- JavaScript & Ajax
- Thymeleaf
- Spring Framework: IoC, Bean, SpEL, JdbcTemplate, Spring Data JPA, Interceptor, Validation, Spring Security.

Database Relationship

Based on the analysis of the requirements, we decide to use the following database tables to store the persistent data for our blog application:

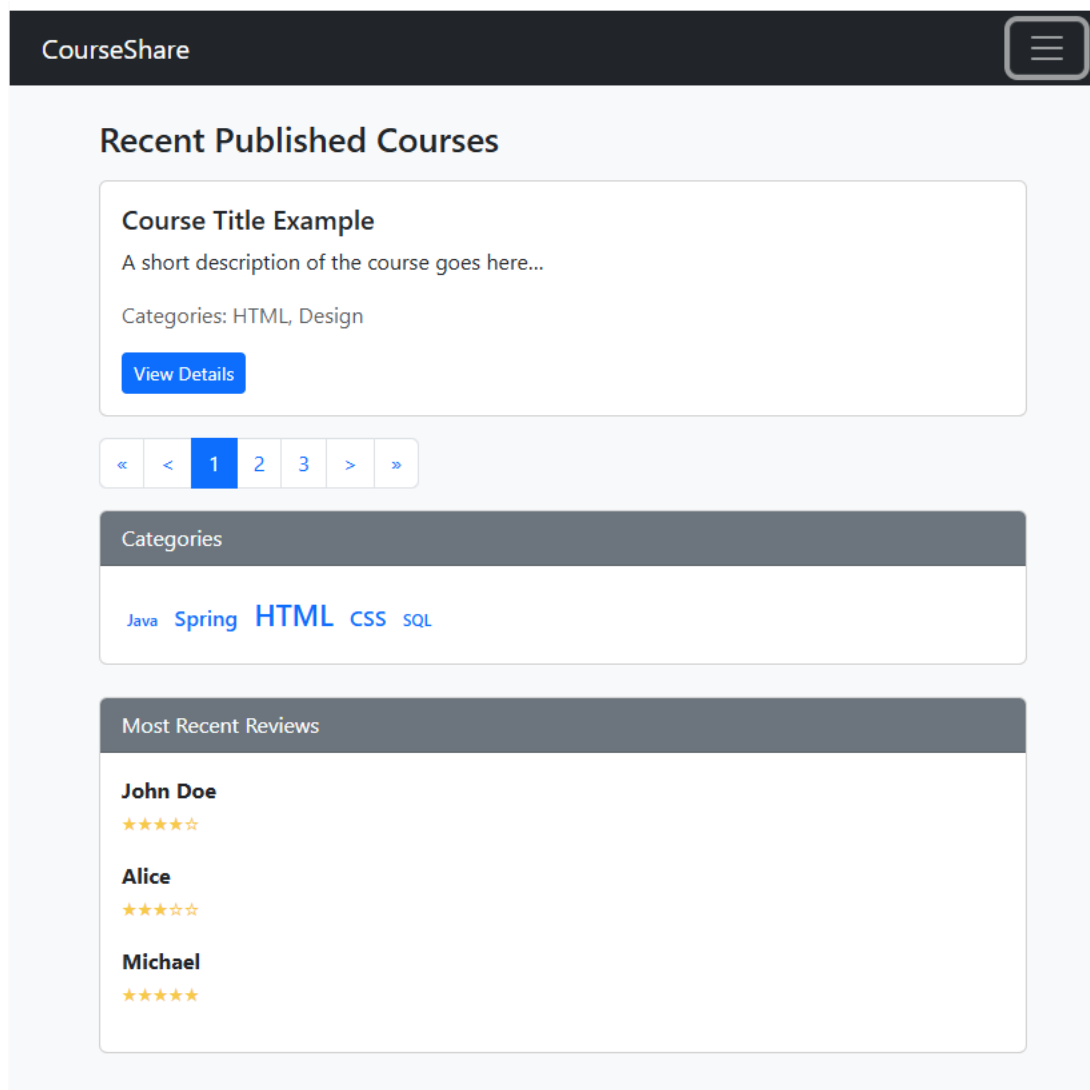

- **tbl_instructor** stores the instructor information, including username and password for login.
- **tbl_course** stores the course information. It mainly consists of:
 - title: required, title of the course.
 - description: required, a short summary of the course.
 - content: required, full details of the course (uses Markdown).
 - status: required, status of the course (e.g., 1=DRAFT, 2=PUBLISHED, 3=ARCHIVED).
 - category: optional, a list of comma-separated words categorizing the course.
- **tbl_review** stores the course review information. Each review is associated with a course:

- author_name: required, the student's name.
 - email: required, the student's email.
 - rating: required, a score from 1 to 5.
 - content: required, the review content in plain text.
 - status: required, status of the review (e.g., 1=PENDING, 2=APPROVED).
- **tbl_category** stores course category frequency information (for the category cloud).
 - name: required, the unique category name.
 - frequency: required, the number of courses associated with this category.
- tbl_lookup stores generic lookup information (e.g., mapping status '1' to 'Draft').

Assignment Descriptions

Student Reviews

John Doe
★★★★☆
Very helpful course, I learned a lot!

Alice Green
★★★★☆
Good content but could use more examples.
